Business Impact Analysis (BIA) Guidance Service

A Business Impact Analysis is a strategic process that helps organizations understand how disruptions, like cyberattacks, system failures, or natural disasters could impact critical operations. The BIA identifies the most vital business functions, quantifies the effects of disruptions, and lays the foundation for informed risk management and continuity planning.
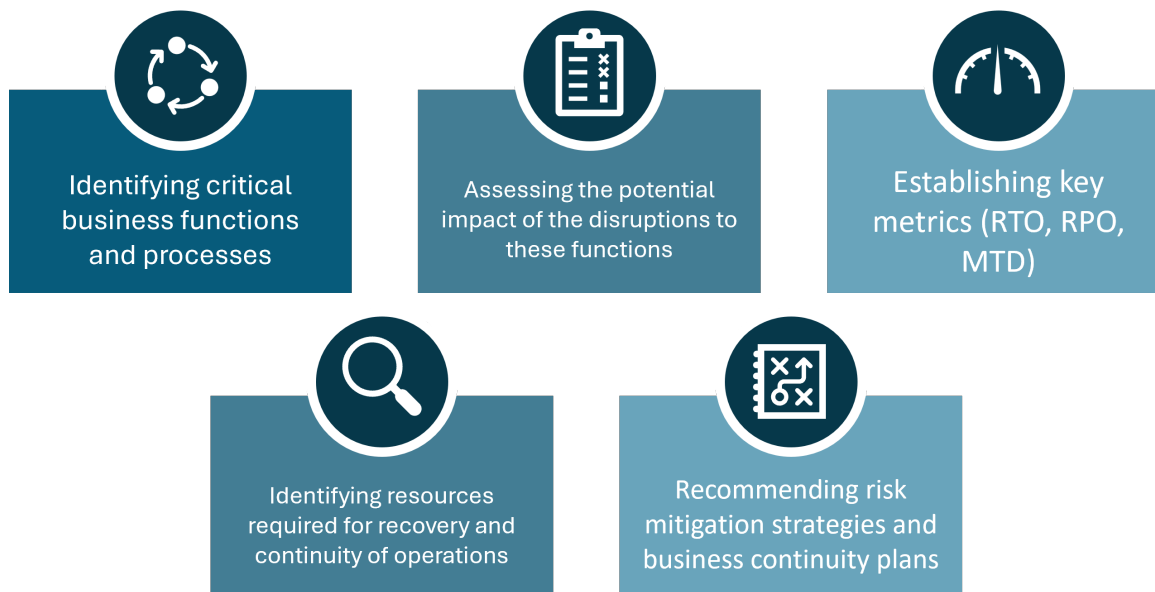

BIAs are essential for:

- Prioritizing recovery efforts and investments
- Supporting business continuity and disaster recovery plans
- Meeting regulatory and compliance requirements
- Aligning IT and security decisions with business needs

How K logix Helps:

At K logix, we take a risk-informed, business-first approach to BIA. Our cybersecurity and risk experts partner with your internal teams to analyze operations, map dependencies, and create tailored continuity strategies.

Our BIA Service includes:

Identifying critical business functions and processes

Assessing the potential impact of the disruptions to these functions

Establishing key metrics (RTO, RPO, MTD)

Identifying resources required for recovery and continuity of operations

Recommending risk mitigation strategies and business continuity plans

By blending cybersecurity expertise with strategic advisory, we help organizations build more resilient, informed, and prepared operations, ready to respond when it matters most.
